## AP Statistics

$\qquad$

1. Is the distribution of colors of M\&M's in my bag the same as the Mars Company claims? Count the data, and let's find out! This will be a Chi-Square Goodness of Fit Test.

|  | Brown | Yellow | Red | Blue | Orange | Green |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| M\&M Mars <br> Official \%'s |  |  |  |  |  |  |
| My bag: |  |  |  |  |  |  |
| Expected in <br> my bag: |  |  |  |  |  |  |

2. Medical researchers enlisted 108 subjects for an experiment comparing treatments for depression. The subjects were randomly divided into three groups and given pills to take for a period of three months. Unknown to them, one group received a placebo, the second group received the "natural" remedy St . Johnswort, and the third group the prescription drug Paxil. After six months psychologists and physicians (who did not know which treatment each person had received) evaluated the subjects to see if their depression had returned. (This will be a Chi-Square Test for Homogeneity.)

|  | Treatment |  |  | Total |
| :--- | :---: | :---: | :---: | :---: |
| Diagnosis | Placebo | St J | Paxil | T |
| Depression <br> returned | 24 | 22 | 14 |  |
| No sign of <br> depression | 6 | 8 | 16 |  |
| $r$ Total |  |  |  |  |

3. Were class and "survivability" on the Titanic independent? (Chi-Square Test for Indepedence)

Titanic Passengers

|  |  | Survived |  | Row Summary |
| :---: | :---: | :---: | :---: | :---: |
|  |  | No | Yes |  |
| Class | 1st | 129 | 193 | 322 |
|  | 2nd | 161 | 119 | 280 |
|  | 3rd | 574 | 137 | 711 |
| Column Summary |  | 864 | 449 | 1313 |

S1 = count ( )
4. How do you tell from the data whether a Chi-Square test for homogeneity or a Chi-Square test for independence is appropriate?
