## AP Statistics: Random Variables

Name: $\qquad$

## Assume $X$ and $Y$ are independent random variables.

1. Find the mean, variance, and standard deviation of $X$.

| X | -1 | 0 | 1 | 2 |
| :---: | :---: | :---: | :---: | :---: |
| P | 0.3 | 0.1 | 0.5 | 0.1 |

2. Find the mean, variance, and standard deviation of Y.

| Y | 2 | 3 | 5 |
| :---: | :---: | :---: | :---: |
| P | 0.6 | 0.3 | 0.1 |

3. Let $\mathrm{W}=3+2 \mathrm{X}$. Find the mean, variance, and standard deviation of W .
4. Let $\mathrm{W}=\mathrm{X}+\mathrm{Y}$. Find the mean, variance, and standard deviation of W .
5. Let $\mathrm{W}=\mathrm{X}-\mathrm{Y}$. Find the mean, variance, and standard deviation of W .
6. Let $\mathrm{W}=\mathrm{X}+\mathrm{X}$. Find the mean, variance, and standard deviation of W .
7. Let $\mathrm{W}=2 \mathrm{X}$. Find the mean, variance, and standard deviation of W .
8. Let $\mathrm{W}=\mathrm{X}-\mathrm{X}$. Find the mean, variance, and standard deviation of W .
9. Let $\mathrm{W}=-2 \mathrm{X}+5 \mathrm{Y}$. Find the mean, variance, and standard deviation of W .

## ANSWERS:

1. Find the mean, variance, and standard deviation of X .

| X | -1 | 0 | 1 | 2 |
| :---: | :---: | :---: | :---: | :---: |
| P | 0.3 | 0.1 | 0.5 | 0.1 |

$\operatorname{Mean}(X)=\mathbf{0 . 4} \quad \operatorname{SD}(X)=\sqrt{1.04} \approx \mathbf{1 . 0 2} \quad \operatorname{VAR}(X)=\mathbf{1 . 0 4}$
2. Find the mean, variance, and standard deviation of Y.

| Y | 2 | 3 | 5 |
| :---: | :---: | :---: | :---: |
| P | 0.6 | 0.3 | 0.1 |

$\operatorname{Mean}(Y)=2.6 \quad \operatorname{SD}(Y)=\sqrt{0.84} \approx .9165 \quad \operatorname{VAR}(Y)=.84$
3. Let $\mathrm{W}=3+2 \mathrm{X}$. Find the mean, variance, and standard deviation of W .
$\operatorname{Mean}(W)=3.8 \quad \operatorname{SD}(W)=\mathbf{5 . 0 4} \quad \operatorname{VAR}(W)=\mathbf{2 5 . 4 0 1 6}$
4. Let $\mathrm{W}=\mathrm{X}+\mathrm{Y}$. Find the mean, variance, and standard deviation of W .
$\operatorname{Mean}(W)=3.0 \quad \operatorname{SD}(W)=\sqrt{1.88} \approx \mathbf{1 . 3 7} \quad \operatorname{VAR}(W)=\mathbf{1 . 8 8}$
5. Let $\mathrm{W}=\mathrm{X}-\mathrm{Y}$. Find the mean, variance, and standard deviation of W .

$$
\operatorname{Mean}(W)=-2.2 \quad \operatorname{SD}(W)=\sqrt{1.88} \approx 1.37 \quad \operatorname{VAR}(W)=1.88
$$

6. Let $\mathrm{W}=\mathrm{X}+\mathrm{X}$. Find the mean, variance, and standard deviation of W .

$$
\operatorname{Mean}(W)=\mathbf{0 . 8} \quad \operatorname{SD}(\mathbf{W})=\sqrt{2.08} \approx \mathbf{1 . 4 4} \quad \operatorname{VAR}(\mathbf{W})=\mathbf{2 . 0 8}
$$

7. Let $\mathrm{W}=2 \mathrm{X}$. Find the mean, variance, and standard deviation of W .

$$
\operatorname{Mean}(W)=0.8 \quad \operatorname{SD}(W)=2 \sqrt{1.04} \approx 2.04 \quad \operatorname{VAR}(W)=4.16
$$

8. Let $\mathrm{W}=\mathrm{X}-\mathrm{X}$. Find the mean, variance, and standard deviation of W .

$$
\operatorname{Mean}(W)=0 \quad \operatorname{SD}(W)=\sqrt{2.08} \approx 1.44 \quad \operatorname{VAR}(W)=\mathbf{2 . 0 8}
$$

9. Let $\mathrm{W}=-2 \mathrm{X}+5 \mathrm{Y}$. Find the mean, variance, and standard deviation of W .

$$
\begin{aligned}
& \operatorname{Mean}(W)=12.2 \quad \operatorname{SD}(W) \approx 5.02 \quad \operatorname{VAR}(W)=\mathbf{2 5 . 1 6} \\
& W=5 Y-2 X, \operatorname{so} \operatorname{VAR}(5 Y-2 X)=\left(5^{\wedge} 2\right)(0.84)+\left(2^{\wedge} 2\right)(1.04)=25.16 \\
& \text { OR alternatively, } \quad \operatorname{SD}(5 Y)=5(0.9165)=4.5825 \text {, so } \operatorname{VAR}(5 Y)=4.5825^{\wedge} \mathbf{2} \approx 21 \\
& \operatorname{SD}(2 X)=2(1.02)=2.04, \text { so } \operatorname{VAR}(2 X)=2.04 \wedge 2=4.16 \\
& \text { Since "variances of independent random variables add," } \\
& \operatorname{SD}(5 Y+2 X)=21+4.16=25.16
\end{aligned}
$$
